Lab Activity 1: Laravel Application with Authentication

Objectives

At the end of this laboratory activity, students should be able to:

1. Install and configure Laravel Breeze.
2. Create routes for guest and authenticated users.
3. Create and use Laravel controllers.
4. Pass data from controllers to Blade views.
5. Create reusable Blade layouts and components.
6. Use Blade directives appropriately.
7. Create forms using Laravel's CSRF protection.
8. Use route parameters and named routes.
9. Explain and demonstrate how their Laravel application works

Scenario

Develop a small Laravel website based on a theme of your choice.

Possible themes include:

- School Portal
- Student Organization Website
- Online Bookstore
- Restaurant Website
- Travel Website
- Gaming Community
- Pet Care Website
- Fitness Website
- Portfolio Website
- Event Management Website
- Small Business Website

You may choose another theme provided that it is appropriate for the activity.

Each student's website should have its own content, structure, and theme.

1. Laravel Breeze Installation

Create a Laravel project and install Laravel Breeze.

Laravel Breeze must provide the authentication functionality of the application.

The following authentication features must be functional:

- Registration
- Login
- Logout
- Authentication Middleware

After successfully logging in, the authenticated user should be able to access the protected pages of the application.

2. Guest Pages

Create at least 5 pages that can be accessed without logging in.

Example:

1. Home
2. About
3. Services
4. Products
5. Contact

You may use different pages depending on the theme of your application.

Requirements

The guest pages must:

- Have working routes.
- Use named routes.
- Use Blade templates.
- Share a common Blade layout.
- Have a working navigation menu.
- Contain meaningful content related to the selected website theme.

At least 1 page must demonstrate the use of a route parameter.

Example:

```
None
/products/{id}
```

The value passed through the URL must be used or displayed on the corresponding page.

3. Authenticated User Pages

Create at least 3 pages that can only be accessed by authenticated users (default authenticated page from breeze must not be counted).

Examples:

1. Dashboard
2. Profile
3. My Records

Other possible pages include:

- My Orders
- My Reservations
- My Favorites
- Account Settings
- Student Information
- My Events
- My Applications

These pages must be protected using Laravel's authentication middleware.

A guest user who manually attempts to access a protected page should be redirected to the login page.

4. Controllers

Create at least 2 controllers for the application.

Do not place all application logic directly inside `routes/web.php`.

Example controller names:

```
None
PageController

DashboardController
```

The controllers should contain methods responsible for displaying pages and processing application requests.

At least 1controller method must pass data to a Blade view.

The data must then be displayed on the corresponding page.

5. Laravel Breeze Layout Customization

Since Laravel Breeze already provides reusable Blade layouts and components, you are not required to create a completely separate authenticated layout from scratch.

Instead, customize and reuse the layout provided by Laravel Breeze.

The default Laravel Breeze design should not remain completely unchanged.

Your customization should reflect the theme of your application.

Required Customizations

Modify appropriate elements such as:

- Application name
- Logo or branding
- Navigation links
- Page headings
- Page content
- Colors
- Buttons
- Typography
- Spacing
- Authenticated-user navigation

Your three authenticated pages should use the Breeze layout appropriately.

6. Forms and CSRF Protection

Create at least **ONE (1) form**.

Possible forms include:

- Contact Form

- Feedback Form
- Profile Form
- Reservation Form
- Inquiry Form
- Application Form

The form must:

- Contain appropriate input elements.
- Use CSRF protection.

The form must contain:

```
None
@csrf
```

Submission Instructions

Submit **ONE PDF file** containing screenshots that show the **progress of your work from setup to final output**.

Your screenshots should include key stages such as:

- Laravel project creation
- Laravel Breeze installation
- Routes and controllers
- Guest and authenticated pages
- Breeze layout customization
- Blade component and `$slot`
- Form with `@csrf`
- Testing and final output

Arrange the screenshots in **chronological order** and add a short caption for each.

Screenshots should clearly show the code editor, terminal, browser output, or relevant files when applicable.

Do not submit only final-output screenshots. The PDF must show how the project was developed step by step.

File Name : Lastname_Firstname_LabActivity1.pdf

Grading Rubric — 100 Points

A. Web Application — 50 Points

Criteria	Points
Laravel Breeze Installation and Authentication	5
Five Guest Pages	5
Three Additional Authenticated Pages and Authentication Middleware	5
Routes, Named Routes, and Route Parameter	5
Controllers and Passing Data to Blade Views	5
Laravel Breeze Layout Customization	5
Blade Component, `$slot`, and Named Slot	5
Blade Directives	5
Form and CSRF Protection	5
Progress Screenshots, Project Organization, and Final Output	5
TOTAL — WEB APPLICATION	**50**

B. Individual Assessment — 50 Points

Each student will be checked individually during class hours.

The student must demonstrate and explain the Laravel application submitted for the activity.

The instructor may ask the student to open, locate, explain, demonstrate, troubleshoot, or modify any part of the project.

Specific questions and modifications will not be announced in advance.

Criteria	Points
Understanding of Routes and Named Routes	5

Understanding of Route Parameters	5
Understanding of Controllers and Controller Methods	5
Understanding of Data Passing from Controller to View	5
Understanding of Blade Views and Directives	5
Understanding of Laravel Breeze and Authentication	5
Understanding of Middleware and Protected Pages	5
Understanding of Layouts, Components, `$slot`, and Named Slots	5
Understanding of Forms and CSRF Protection	5
Ability to Perform a Requested Modification	5
TOTAL — INDIVIDUAL ASSESSMENT	**50**

Overall Grade

Component	Points
Web Application	50
Individual Assessment	50
TOTAL	**100**
